

Efforts toward Soil Decontamination

In the independent soil contamination research conducted in 2002, contaminated soil was found in the Head Office site (around the former cleaning room). We reported this situation to the relevant authority (Matsudo municipal government) and started decontamination work.

In 2004, we investigated whether there was any soil contamination at the site of our subsidiary, Mabuchi Precision Industries, Ltd., upon the closure of the factory and detected soil contamination. We immediately reported this situation to the Gunma prefectural government and started decontamination work.

Soil decontamination work at those two locations is still ongoing and the mean concentration of contaminants in groundwater is decreasing year by year. In the measurement in fiscal 2008, the mean concentration of contaminants in groundwater at the Head Office site decreased by 30% over the previous year.

We will try various other measures to achieve early decontamination while continuing with the current decontamination work.

Groundwater decontamination equipment installed at the site (the Head Office)

Report of Environmental Data

The following tables show the environmental data of the Mabuchi Group.

Data of Danang Mabuchi in Vietnam, which acquired ISO 14001 certification in fiscal 2008, is included in the Mabuchi Group Data beginning in this year.

The Mabuchi Group's Environmental Data

Fiscal 2006

Type	Unit	The Head Office	Hong Kong Mabuchi	Taiwan Mabuchi	Kaohsiung Mabuchi	Dalian Mabuchi	Jiangsu Mabuchi	Vietnam Mabuchi
Electricity purchased	10,000 kWh	913	9,906	483	926	2,975	1,101	2,567
Petroleum gas	t	5	17	9	10	470	19	53
City gas	t	129	0	0	0	0	0	0
Coal	t	0	0	0	0	10,861	0	0
